

WEEK 10: ANIMAL ODDITIES

Using the Right Word, Comma (Series), Comma (Interruptions), Spelling, Capitalization, Hyphen (Single Thought Adjective)

The elusive squid is known for having a squishy body long tentacles and a feisty disposition. However it is not known for having elbows. A dive team working for an oil company in the gulf of Mexico in 2007 was shocked when they got a glimpse of this bent limbed beast. Using an underwater camera at a drilling site about a mile and a half below the surface of the water they filmed several seconds of this large squid. Focusing the camera on the animal revealed that its long legs and tentacles jutted out from its body and then trailed down from the appendages at sharp right angles. In other words the squid had elbows.
